Software: Bundle of Java SE and Net Beans

Course Description: This course is a continuation of CTEC 150 in addition to event handling, exception handling, GUIs, simple data structures, an introduction to algorithm analysis and internal searching and sorting techniques, and recursion.

Learning Outcomes:

At the end of this course, the student will:

- A. apply the object-oriented principles of abstraction, encapsulation, inheritance, interfaces, and polymorphism in program design;
- B. utilize arrays or array lists in programs;
- C. write programs that read from and write to files;
- D. design fault-tolerant programs with exception handling;
- E. examine the design, implementation, and efficiency of recursive algorithms.

To achieve the learning outcomes, the student will or will be able to:

(The letter designations at the end of each statement refer to the learning outcome(s).)

1. describe and implement inheritance and polymorphism (A);
2. implement searching and sorting applications in arrays (B);
3. save data and read data from a file (C);
4. describe exception handling and use try and catch blocks (D);
5. implement and compare recursive and iterative solutions to programming problems (E)

Course Requirements:

1. A student must successfully complete the course with an average of 70% or above on the combined learning outcomes.
2. Each student is expected to attend classes regularly; excessive unexcused absences constitute grounds for suspension (refer to the student handbook for attendance policies).
