Course Description: This course provides a comprehensive overview of the core elements of the software development process, including common software development methodologies, source control, refactoring, and testing. This course also includes programming projects where the students work in teams.

Learning Outcomes:

At the end of this course, the student will:

- A. describe software development methodologies;
- B. develop software in a team environment using software source control;
- C. use software refactoring techniques; and
- D. use software testing techniques.

To achieve the learning outcomes, the student will or will be able to:

(The letter designations at the end of each statement refer to the learning outcome(s).)

1. describe the waterfall, spiral, iterative, and agile development methodologies (A);
2. describe software source control approaches (B);
3. use software source control in a team programming environment (B);
4. use software refactoring techniques to debug programs (C);
5. use software refactoring techniques to redesign software (C);
6. describe standard software testing methods, levels, and types (D); and
7. use software testing techniques to document software issues (D).

Course Requirements:

1. A student must successfully complete the course with an average of 70% or above on the combined learning outcomes.
2. Each student is expected to attend classes regularly; excessive unexcused absences constitute grounds for suspension (refer to the student handbook for attendance policies).

Course Grading Scale:

A = 90 - 100
